Art Unit: 3751

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-2 and 5-7 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. No support is found in the original disclosure for the now claimed "flush with an outer surface of the handgrip, over the longitudinal length of the union nut". The original drawings show the union nut non-formally i.e. in broken lines and in a tapered nature, as the diameter of the nut where it connects to the showerhead appears to be larger than the diameter at the opposite end. The disclosure at page 3, lines 3-11, merely states that the union nut "forms an extension of the grip" and the text at page 4, lines 16-17, merely states "its outer surface is flush with the outer surface of the handgrip". Here, "the outer surface is not defined" and the ordinary artisan could not infer from this, the meaning now claimed and argued for, particularly in light of the tapered nature shown in the original drawings.

The proposed drawing correction filed on 4/6/07 is disapproved as the depiction of the union nut is inconsistent with that of the original drawings as discussed supra.
